

# Construction Projects 1986-87

# THE COVER

"THE GREAT SAUK TRAIL" shown on the highway sign in the central picture, is a long trail commencing in Illinois used by the Sauk and Fox Indian tribes who made yearly journeys to Amherstburg to secure presents from the British Government in return for services rendered in the War of 1812. During the war, American General Hull marched from Detroit with 2500 Regulars to attack Fort Malden. Hull was held in check for several weeks at Riviere Aux Canards by British Regulars supported by many Indians and eventually forced to flee across the Detroit River.

In recognition of the historic significance, Highway 18, which approximates this route, has been designated a Heritage Highway and is signed and marked on the Provincial Road Maps. A historic plaque has also been erected at a small roadside park to commemorate the "Skirmishes at the Canard River."

The Ministry proposes to make Highway 18 a four-lane facility between Amherstburg and Windsor. The initial widening north of Amherstburg is presently being carried out.

The pictures on the cover surrounding this, depict other types of projects carried out by this Ministry.

## FOREWORD

This publication presents the proposed Capital Construction projects for 1986-87. This includes new highway projects to commence this fiscal year as well as unfinished contracts from previous years that will have significant expenditure this year. The projects provide for rehabilitation of existing highways and bridges, as well as construction of new links to relieve congestion and complement economic development. Also included are projects to be undertaken by the Ministry for other authorities or agencies under cost sharing agreements.

Two major projects, the E.C. Row Expressway in Windsor and the Queensway in Ottawa, have been accelerated so that their completion dates are now in advance of previous schedules. In addition, we are continuing to make steady progress on Highway 403 from Brantford to Woodstock, Highway 8N - a new four-lane freeway in Cambridge, Highway 410 in Brampton, Queen Elizabeth Way from Highway 20 to Highway 403, Highway 404 to Newmarket, Highway 35/115 four-laning north of Newcastle and the twinning of Highway 115 southwest of Peterborough. Other improvements on major highways include new interchanges at Highway 11 and Taylor Road, Bracebridge and Highway 401 and Winston Churchill Boulevard, Mississauga and collector lanes on Highway 403 south of Highway 401 from Matheson Avenue to Eglinton Avenue.

Rehabilitation work such as resurfacing and reconstruction will continue as required, to maintain the standard of the existing highway system. This year's projects will include Highway 401, Tilbury to Belle River Road - westbound lanes and Cobourg to Belleville - eastbound and westbound lanes at various locations; Highway 21, Highway 80 southerly; Highway 10, Primrose to Shelburne; Highway 70 north of Highway 6; Highway 20, Fonthill westerly; Highway 2, Oshawa easterly to Courtice and Highway 106 southerly; Highway 35, Rosedale to Coboconk; Highway 62, Bonnechere northerly to township line; Highway 507, Catchacoma northerly; Highway 648, Highway 121 northerly to Wilberforce; Highway 518, Highway 11 easterly and westerly; Highway 654, Highway 11 westerly; and modifications to the Highway 401/Don Valley Parkway interchange.

In Northern Ontario, staged construction will continue on the Kenora Bypass and the Sudbury North-west Bypass. In addition, construction of the Smooth Rock Falls Bypass will begin and Highway 101 will be widened to four lanes between Schumacher and South Porcupine. Rehabilitation projects on the King's Highway system will include sectors of Highway 11 west of Smooth Rock Falls and west of Atikokan; Highway 17, north of Wawa and east of Upsala; Highway 6, north and south of Manitouwaning; and Highway 65, east of Elk Lake. A number of projects for upgrading various sections of Secondary Highways are also included.

A continuing emphasis on rehabilitation of existing bridges is equally important in maintaining the highway system. The main project to be awarded this year will be the rehabilitation of the existing Burlington Bay Skyway bridge. Many bridge decks will be repaired in conjunction with road work and many others will be rehabilitated independently. This type of work, which is labour intensive, will be distributed across the entire province.

There are also a number of specific activities that will be continued in 1986. A total of eleven more passing lanes will further complement passing opportunities on the highway system. Work will continue on four remote airports in North-Western Ontario. The installation of retrofit noise barrier walls will be tendered on three sites along freeways in Central Ontario.

In addition to the work highlighted above, many other projects are listed in this publication. All of these projects are necessary to address the basic needs of the provincial highway system.

## EXPLANATION OF FINANCIAL CATEGORIES

### Capital Construction Projects

This represents a significant part of the Provincial Highways Program and consists of major contract work on roads and bridges. Included, are contracts carried over from the previous fiscal year, as well as proposed new work.

### Facilities Construction

The construction of buildings and sites for patrol yards and for truck inspection stations, both of which contribute to the maintenance of the highway system, are included in this category. These facilities are funded by the Ministry of Transportation and Communications for northern and southern Ontario.

### Miscellaneous Construction

This covers a variety of work which is not provided for in the other categories such as:

- (i) Projects which represent needed highway improvements of a geometric or structural nature which do not readily fall into either the normal contract process or the maintenance activity - the work is carried out by direct utilization of local labour, equipment and materials.
- (ii) Projects in which the Ministry is involved as an owner or as an interested party - in many cases the work is carried out by a municipality or other agency and a portion of the cost is paid by the Ministry.
- (iii) Special or Service Contracts - consisting of work supplementary to capital contracts.
- (iv) Railway Level Crossing Protection - consisting of the installation of automatic signal protection, or the modernization of existing signal protection, at highway-railway level crossings.

### **Preliminary Project Work**

The estimated cost of such items as utility relocation, advance clearing, purchase of construction materials and other work undertaken prior to a contract award, is allocated to this category.

### **Property Purchase**

The purchase of property or right-of-way user rights, for the construction and maintenance of provincial highways in Ontario, is covered by this category.

### **Support Services**

This represents the funding for several administrative units whose services are integral functions of the acquisition and construction process.

## MAJOR PROJECTS - SOUTHERN ONTARIO

The following pages describe several projects that have been selected to highlight this year's activity. All of these projects involve highway construction of considerable magnitude and cost and each is vital to the efficient performance of the provincial transportation system.

The resumés feature work that has recently been completed, work that is underway and work that is to be tendered this fiscal year. Maps are also included, in order to identify projects locations.

| Highway 115          | - Peterborough southwesterly                | XVI  |

## E.C. Row Expressway - City of Windsor

In 1970, the Ministry of Transportation and Communications in partnership with the City of Windsor commenced construction of the E.C. Row Expressway. The expressway was to provide a connection between Highway 2 on the east and Highway 18 on the west.

To date, the initial phase of the project has been completed. Traffic can travel the expressway from Highway 2 to Highway 18. In future years, it is planned to provide grade separated interchanges at Huron Church Road and Dominion Boulevard, and widen the east and west ends by the addition of two driving lanes.

Work will commence on the interchanges at Huron Church Road and Dominion Boulevard this year. Due to foundation considerations and the magnitude of the work, it is planned to tender a number of contracts over the next few years to complete these interchanges.

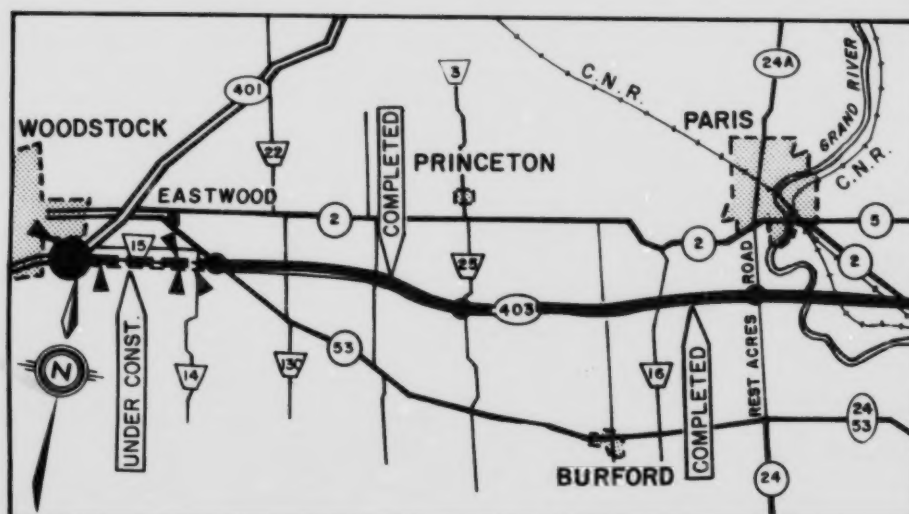

## Highway 403 - Brantford to Woodstock

The contract for granular base and paving from Brant County Road 25 to Oxford County Road 14 was completed in the fall of 1985. The westerly extension of Highway 403 is now open to traffic from Rest Acres Road to Highway 53.

The contract from Oxford County Road 14 to Highway 401 was awarded late in 1985 and is expected to complete this year. This project is for grading, drainage and four structures.

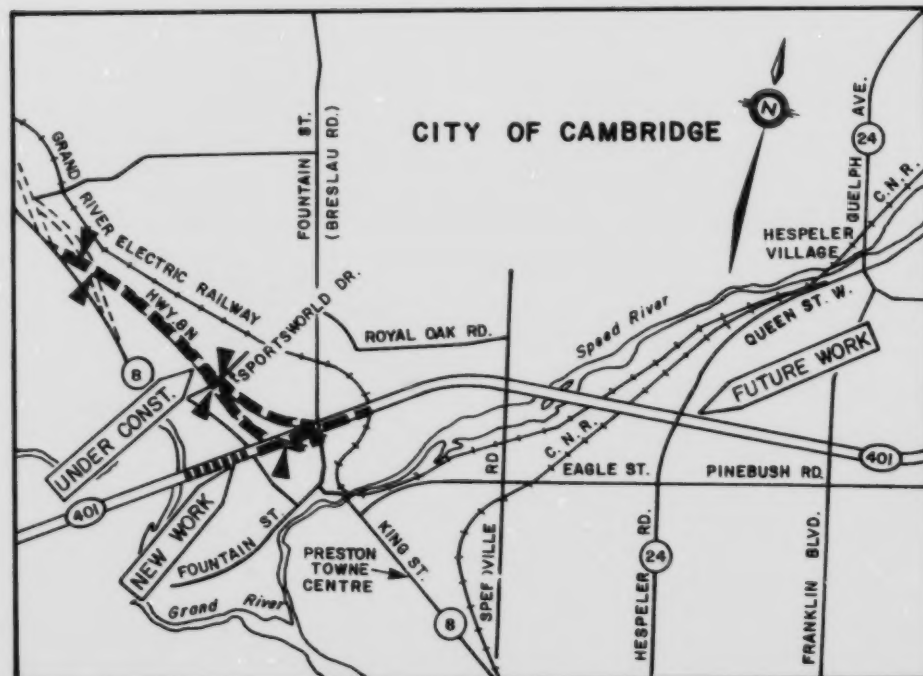

Upon completion of the above work, a final contract will be awarded for the granular base and paving from Highway 53 to Highway 401, and will include the Highway 401 interchange overpass structure.

### Highway 8N - Cambridge - From Highway 401 Northerly to Freeport Drive

In 1985, a contract was awarded for the construction of a new four-lane freeway. The highway is located east of and parallel to existing Highway 8, between Highway 401 and Freeport Drive. The work involved the initial grading, drainage, and a structure for Highway 8N and the widening of Highway 401 to six lanes from Highway 8 easterly to the Grand River Electric Railway.

This year, another contract will be tendered which will complete the freeway between Highway 401 and existing Highway 8 in the vicinity of Freeport Drive. A grade separated interchange is to be provided at Freeport Drive, structures are to be built for Sportsworld Drive, the widening of Highway 401 will be extended westerly to the Grand River, existing Highway 8 will be resurfaced in part and the Highway 401/8 interchange will be modified.

## Queen Elizabeth Way - Burlington to Hamilton

Capacity improvements were initiated in the Queen Elizabeth Way corridor between Burlington and Hamilton, to relieve the existing heavy rush hour traffic, as well as operational problems.

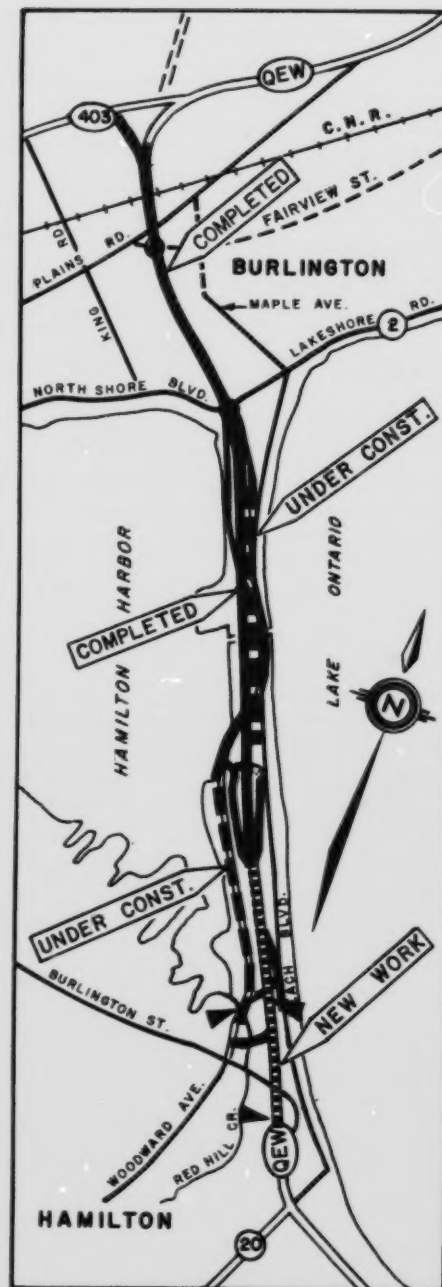

The widening of the Queen Elizabeth Way between Highway 2 and Highway 403, including the Fairview Street interchange, was completed in the summer of 1985.

The last contract to complete the Hamilton-Burlington arterial road from the south end of the Skyway to Woodward Avenue, including the Red Hill Creek bridge, has been awarded and will complete this spring.

The new Burlington Skyway structure was completed well ahead of schedule, and was opened to traffic last fall. At the same time, the contract for the construction of the approaches to facilitate the traffic switch to the new Skyway, was also completed.

The contract for the removal of the concrete deck and repair of the structural steel on the old Skyway, was awarded late in 1985 and is scheduled to complete this fall.

A separate contract to construct a new concrete bridge deck on the old Skyway will be awarded this year following the completion of the deck removal. Also, a contract will be awarded this summer for widening of the Queen Elizabeth Way from the south end of the Skyway to just south of the Burlington Street interchange. Included in the contract will be the construction of a noise barrier on the east side and widening and rehabilitation of the bridges at Woodward Avenue and Red Hill Creek.

## Highway 410 and 7 New - Brampton

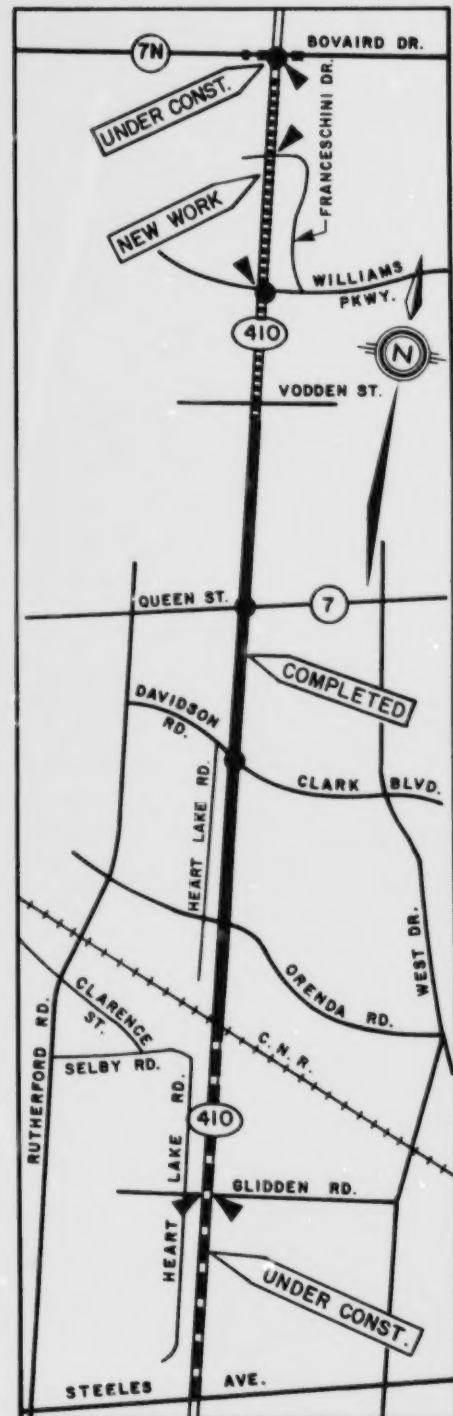

The Ministry of Transportation and Communications is constructing Highway 410 through the City of Brampton in accordance with the official plan which provides for a major transportation facility along the Heart Lake Road corridor. The design concept includes a four lane divided controlled access highway with interchanges at Steeles Avenue, Clark Boulevard, Queen Street, Williams Parkway and Bovaird Drive, as well as a depressed grade adjacent to residential areas to provide adequate noise attenuation. Also, Highway 7 New will be constructed along Bovaird Drive between Heart Lake Road and Highway 10. The design concept on this section includes four-lane arterial road standards with at grade intersections.

Construction of the northbound lanes from south of the Canadian National Railway to south of Vodden Street has been completed.

During 1985, two contracts were awarded. One was for the widening of Highway 7 New from east of Kennedy Road easterly, including the Bovaird Drive/Highway 410 interchange. The second contract was for construction of the northbound lanes of Highway 410 from Steeles Avenue northerly to south of the Canadian National Railway, including the Glidden Road twin structures.

These contracts are expected to complete this summer.

Another contract will be tendered in 1986 for construction of the northbound lanes of Highway 410 from south of Vodden Street to south of Bovaird Drive. The work will include underpasses at Williams Parkway and Franceschini Drive and an interchange at Williams Parkway.

## Highway 404 - North of Metro Toronto

The Ministry has maintained a continuous program for construction on Highway 404 from Highway 401 northerly towards Newmarket. To-date, this new freeway has been completed to the Aurora Road, a distance of 26 km.

Work will soon begin on the final section that will complete Highway 404 to Davis Drive, Newmarket.

Late in the 1985 fiscal year a contract was awarded for advance structures and approach work at St. John's Side Road, Mulock Drive and Davis Drive. This work is expected to complete by the spring of 1987.

An additional contract to complete construction of the roadwork on this section, will follow completion of the structure work.

## Highway 417 - Ottawa Queensway

Rehabilitation of Highway 417 (Ottawa Queensway) includes additional safety features, modifications of interchanges and also, a new lane in each direction to provide for the increased capacity.

Two major rehabilitation projects between Maitland Avenue and Bronson Avenue began in the summer of 1983 and will complete early in 1986. The next contract between Bronson Avenue and Main Street was awarded in 1985 and is expected to complete by the fall of 1987.

These contracts have included grading, drainage, granular base, paving and extensive rehabilitation of associated structures. The concrete median barrier is provided as a safety feature for the travelling public and will contain a new illumination system.

This year, a structure and grading contract for the reconstruction of the St. Laurent Boulevard interchange will be awarded. The expected completion is the fall of 1988. This contract also includes a structure under Highway 417 to facilitate the Regional Municipality of Ottawa Carleton transitway. In addition, another structure contract will be awarded for the widening of the Hurdman bridges over the Rideau River.

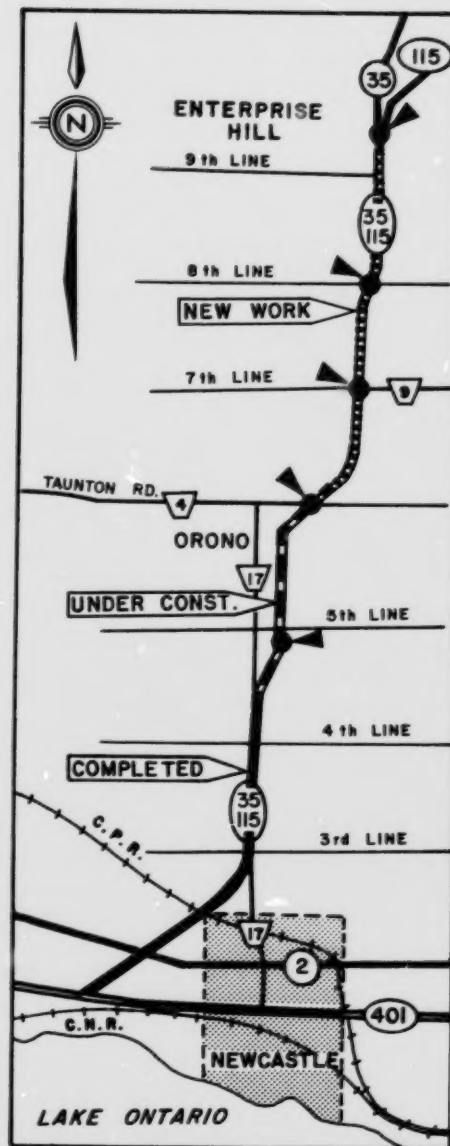

### Highway 35/115 - Highway 2 northerly to Enterprise Hill

The Ministry plans to provide a four-lane limited access highway on this link, to accommodate the high usage by recreational and commercial traffic. This work includes the construction of a median barrier and flyovers and interchanges at main municipal roads.

The four-lane widening has been completed from Highway 401 to the south entrance to Orono (north junction Durham Regional Road 17), a distance of 7.6 km.

A contract was tendered in 1985, for a further 4.3 km to just north of Regional Road 4 (Taunton Road). Under this contract, interchanges will be constructed at Fifth Line and at Taunton Road. This section is scheduled to complete this summer.

The final contract to complete the remaining 8.7 km of this link from just north of Taunton Road northerly to Enterprise Hill will be awarded this year. Included are interchanges at Seventh Line, Eighth Line and at the junction of Highway 115.

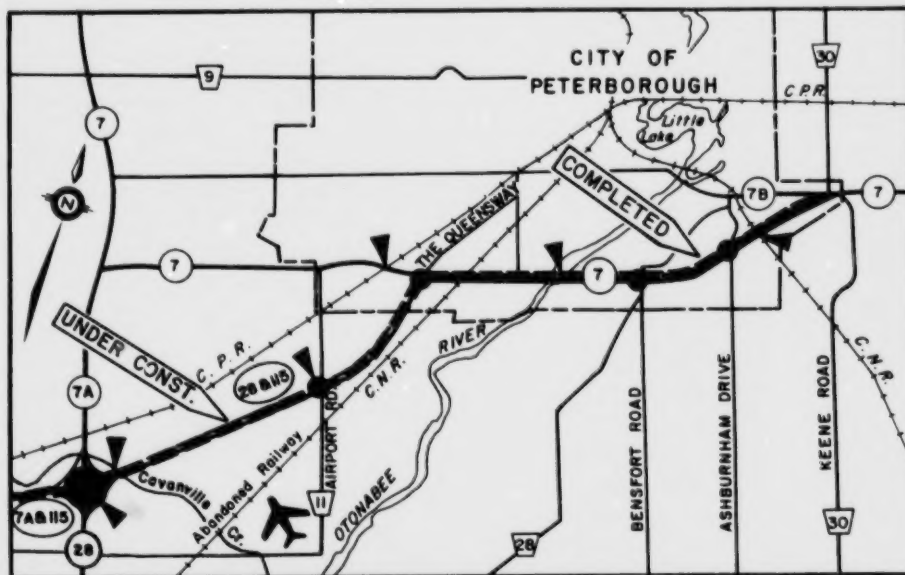

### Highway 115 - Peterborough southwesterly

Existing Highway 115 will be twinned in order to promote economic development in the Peterborough area and to provide additional capacity for the high volume of recreational traffic travelling to the Kawartha Lake Region.

Widening of the Highway 7, Peterborough Bypass, is complete.

In 1985, a contract was awarded for twinning Highway 115 from the Peterborough Bypass to 1.0 km southwest of Highway 28. This work includes structures at County Road 11 (Airport Road), Cavanville Creek and Highway 28, construction of an interchange at County Road 11 and modifications to the Highway 28 interchange. Construction is expected to complete this fall.

## SPECIFIC ACTIVITIES

### Passing Lanes

The construction of passing lanes and truck climbing lanes has proven to be a cost effective means of providing safe opportunities to pass slower moving vehicles and maintaining the operational flow of traffic. A review of traffic operations where passing lanes have been constructed, indicates that they function in a very satisfactory manner and public reaction has been favourable, especially on the Trans-Canada Highway in Northern Ontario.

It is intended to continue with the construction of passing lanes in areas where the present criteria and experience indicate they will be effective. Eleven passing lanes are planned for award during the 1986-87 fiscal year, of which, six are in Southern Ontario.

The following table indicates the number of passing lanes constructed in Northern and Southern Ontario over the past ten years on an annual basis.

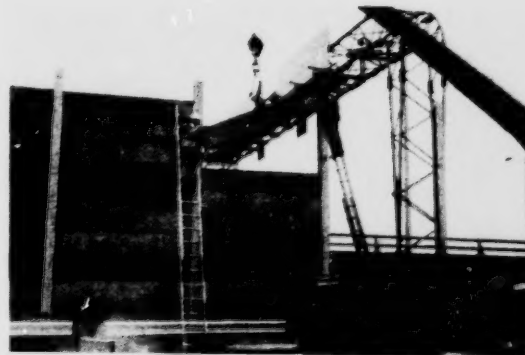

| <u>Year</u>                                  | <u>Northern<br/>Ontario</u> | <u>Southern<br/>Ontario</u> |
|----------------------------------------------|-----------------------------|-----------------------------|
| 1985                                         | 6                           | 7                           |

## Noise Barriers

In 1977, the Ontario Government adopted a policy to address traffic generated freeway noise. Since then, noise barriers have been erected at more than sixty locations. Walls have been erected along the Ottawa Queensway, Highways 401, 403, 404 and 427, and the Queen Elizabeth Way.

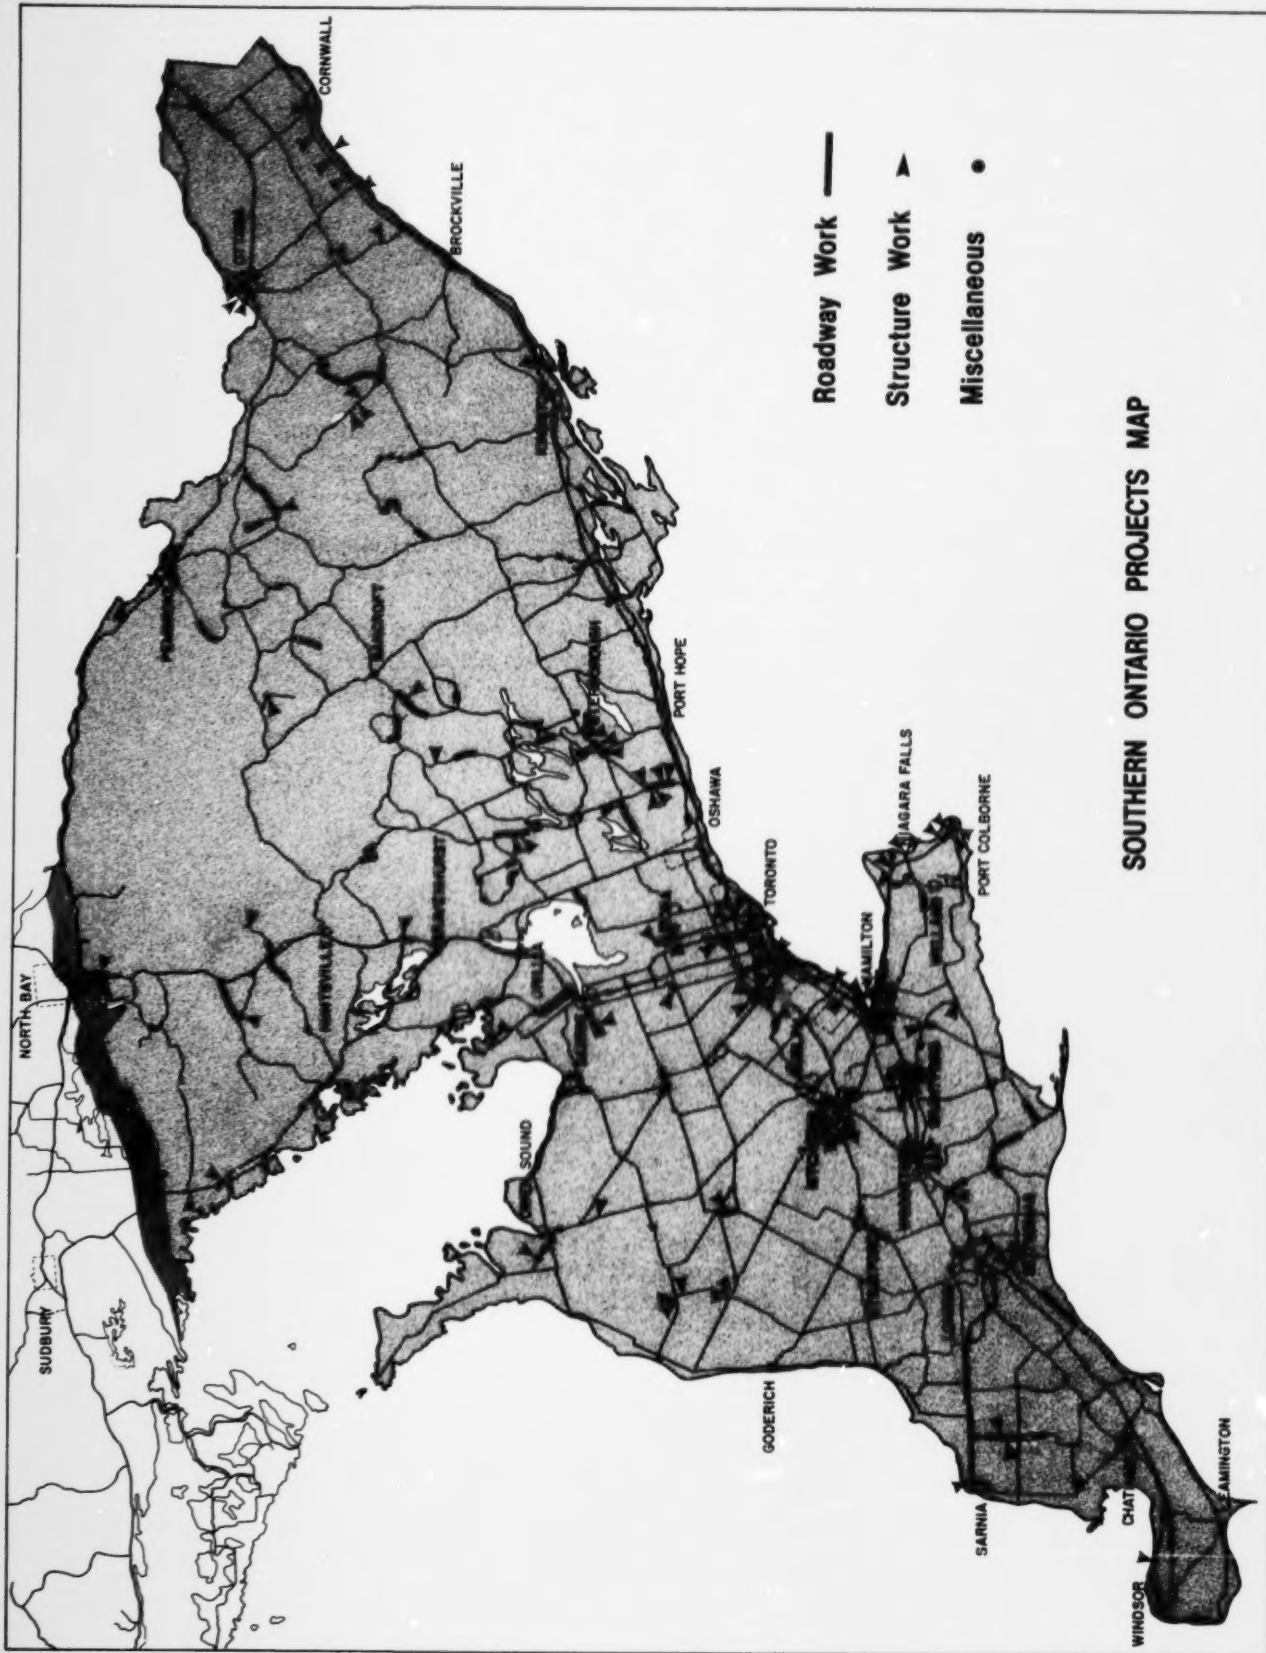

Under the 1986/87 work plan, it is intended to erect noise barrier walls at the following locations:

- |             |               |                                                                      |
|-------------|---------------|----------------------------------------------------------------------|
| Q.E.W.      | - Mississauga | - East of Dixie Road on the north and south sides.                   |
| Q.E.W.      | - Oakville    | - West of Trafalgar Road on the north side.                          |
| Highway 401 | - North York  | - South east quadrant of Highway 401/Don Valley Parkway interchange. |

Pads on lifting device have been modified to eliminate scuff marks on panels.

New type of cover for the fire hose access panels. Flexible material permanently fastened on top to prevent loss of covers.

SOUTHERN ONTARIO PROJECTS MAP

## SUMMARY OF NEW WORK - SOUTHERN ONTARIO HIGHWAYS

An overall summary of capital projects proposed for tender in fiscal 1986-87 is listed below:

|                               |           |
|-------------------------------|-----------|
| Two-Lane                      | km        |
| . paving                      | 165       |
| . prime and surface treatment | 50        |
| . grading and paving          | 157       |
| . grading                     | <u>67</u> |
|                               | 439       |

|                      |           |
|----------------------|-----------|
| Multi-Lane Divided   |           |
| . paving             | 55        |
| . grading and paving | <u>26</u> |
|                      | 81        |

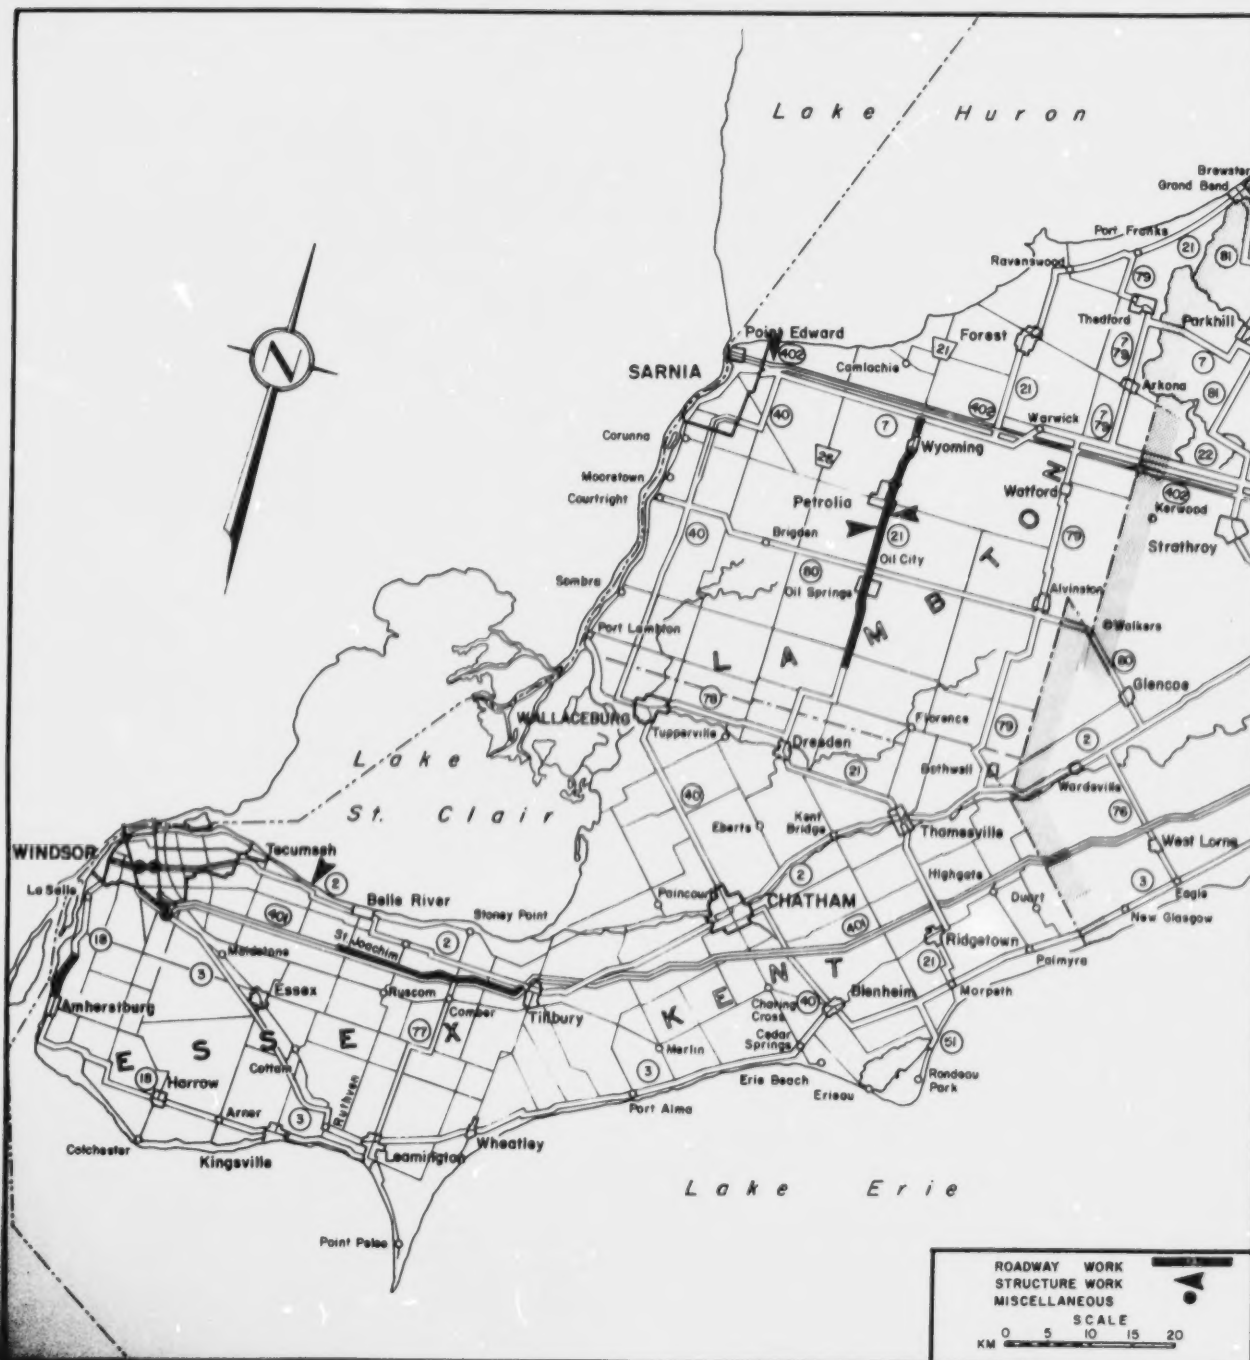

|                      |          |
|----------------------|----------|
| Multi-Lane Undivided |          |
| . grading and paving | <u>5</u> |
|                      | 5        |

|       |     |

SGT. AUBREY COSENS, V.C.  
MEMORIAL BRIDGE

#### THE COVER

Illustrated on this year's cover is the bridge which spans the Montreal River on Highway 11, at Latchford.

This bridge, formerly known as the Montreal River Bridge, will be re-named the "SGT. AUBREY COSENS, V.C. MEMORIAL BRIDGE" in memory of a war hero from this locality.

Dedication ceremonies are planned for the spring of 1986, at which time a Historical Plaque will be unveiled in the park adjacent to the bridge.

## Foreword

This publication presents the proposed Capital Construction Plan for Northern Ontario King's Highways and Secondary Highways, Transportation Development Roads and Remote Airports for the 1986 fiscal year. Included, are projects currently under construction that will entail significant expenditures, as well as new projects that will begin this year.

The Ministry of Northern Development and Mines establishes the priorities and provides the capital funding for these projects. The Ministry of Transportation and Communications is responsible for the design and construction, as well as funding road maintenance and related facilities construction.

The transportation system is vital to the continuing growth of Northern Ontario. The objective of the Ministry of Northern Development and Mines is to provide a first class transportation system that contributes to the economic and social development of Northern Ontario. The Capital Construction Plan will continue upgrading the existing system and will include expansion of the network, where appropriate. These objectives must be consistent with today's economic climate. To this end, each project has been selected on a priority basis to ensure that the available funds are used to the maximum benefit of all residents of Northern Ontario.

The following paragraphs highlight some of the major work proposed for this year:

### King's and Secondary Highways

- . Major work projects will include continuing staged construction on the Kenora Bypass, Sudbury North-west Bypass, the start of construction on the Smooth Rock Falls Bypass and widening of Highway 101 between Schumacher and South Porcupine.
- . Rehabilitation work on the King's Highway system will include Highway 65 east of Elk Lake, Highway 11 between Driftwood and Smooth Rock Falls, Highway 6 north and south of Manitowaning, Highway 17 east of Nairn Centre, Highway 129 north and south of Highway 556, Highway 17 north of Wawa, Highway 11 west of Atikokan, and Highway 17 east of Upsala.

- Rehabilitation work on Secondary Highways will include Secondary Highway 575 north of Highway 17, Secondary Highway 560 east of Elk Lake, Secondary Highway 527 north of the Dorion Road and Secondary Highway 622 north of Sunac Road in Atikokan.
- The construction of passing lanes and paved shoulders which have proven to be very effective from a safety and operational viewpoint, will continue in 1986.

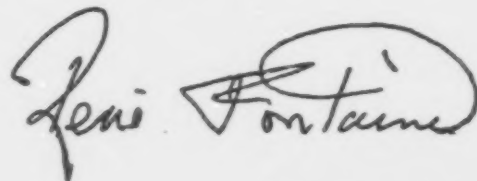

#### Transportation Development Roads:

- A contract will be tendered to build a further 10.0 km section on the Bending Lake Road project.
- The reconstruction of Secondary Highway 587 between Highway 11/17 and Sibley Provincial Park will be undertaken in 1986.

#### Remote Airports:

- Work is scheduled to continue in 1986 on the new airports at Muskrat Dam and Kingfisher Lake.
- Work will continue on the major runway extension to Ogoki Post.
- Funds have been allocated to purchase equipment for a new airport at Wapekeka.
- Capital improvements will be undertaken at 14 existing remote airports.

The Ministry of Northern Development and Mines and the Ministry of Transportation and Communications hope that the release of this book will increase the public's awareness of the Government of Ontario's continued efforts to maintain and improve Northern Ontario's transportation system.

Rene Fontaine  
Minister of  
Northern Development  
and Mines

## **EXPLANATION OF FINANCIAL CATEGORIES**

### **Capital Construction Projects**

This represents the greatest part of the construction activities and consists of major contract work on northern provincial highways. Included, are contracts carried over from previous fiscal years, as well as proposed new work.

### **Preliminary Project Work**

The estimated costs of such items as utility relocation, advance ordering of construction materials and other work that must be undertaken prior to a contract award, are allocated to this category.

### **Miscellaneous Construction**

This covers a variety of work which is not provided for in the other categories, such as:

- (i) Projects in which the Ministry is involved as an owner or as an interested party. In many cases the work is carried out by a municipality or other agency, and a portion of the cost is paid by the Ministry of Northern Development and Mines.
- (ii) Service Contracts - consisting of work supplementary to other contracts such as seeding and mulching.
- (iii) Railway Level Crossing Protection - consisting of the installation of automatic signal protection, or the modernization of existing signal protection at highway-railway level crossings.

### **Minor Capital Projects**

Some projects represent needed highway improvements of a geometric or structural nature, which do not readily fall into either the normal contract process or the maintenance activity. The work is carried out on Secondary Highways by direct utilization of local labour, equipment and materials.

## MAJOR PROJECTS - NORTHERN ONTARIO

The following pages describe several projects which have been selected to highlight this year's activity. All of these projects involve highway construction of considerable magnitude and cost and each is vital to the transportation system in the north. They feature work that has been completed recently, work that is underway and work that is to be awarded this fiscal year. Maps are also included in order to identify project locations.

### CONTENTS

|                                            |      |
|--------------------------------------------|------|
| Highway 144NEW - Sudbury North-west Bypass | VII  |
| Highway 17NEW - Kenora Bypass              | VIII |
| Bending Lake Road                          | IX   |

### Highway 144 New - Sudbury North-west Bypass

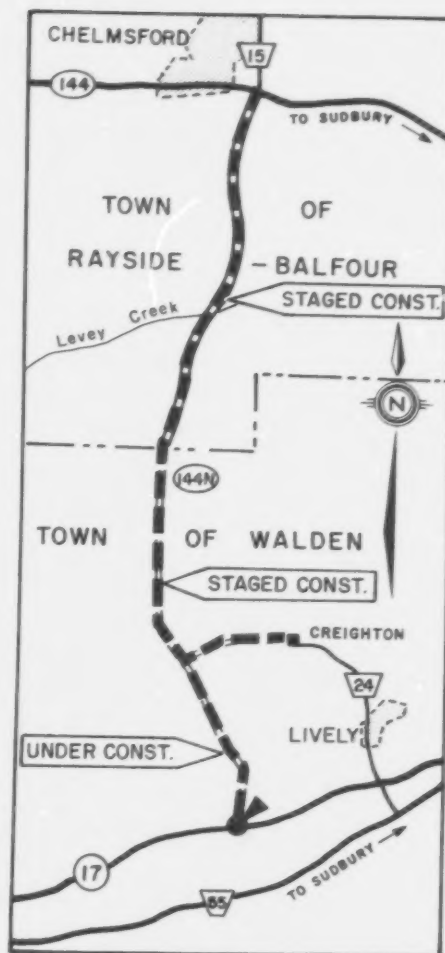

Increasing traffic congestion on existing routes within the Region of Sudbury resulted in planning studies identifying the need for a new route which will form a bypass on the north-west side of Sudbury. This new facility will connect Highway 144 east of Chelmsford and Highway 17 west of Lively.

The initial contract was awarded late in fiscal 1982 for the grading of the northerly 8.7 km including the structure at Levey Creek. This work was completed in the fall of 1983.

During 1984, a contract was awarded for grading a further 6.0 km on Highway 144N, including the structure at the Pumphouse Road. The work was completed in the fall of 1985.

During 1985 a contract was awarded for grading of the 3.3 km link to Highway 17N and the 2.7 km connection to Creighton, including the interchange structure at Highway 17N.

A follow-up contract for paving the entire section from Highway 17 to Highway 144 will complete this new facility.

## Highway 17 New - Kenora Bypass

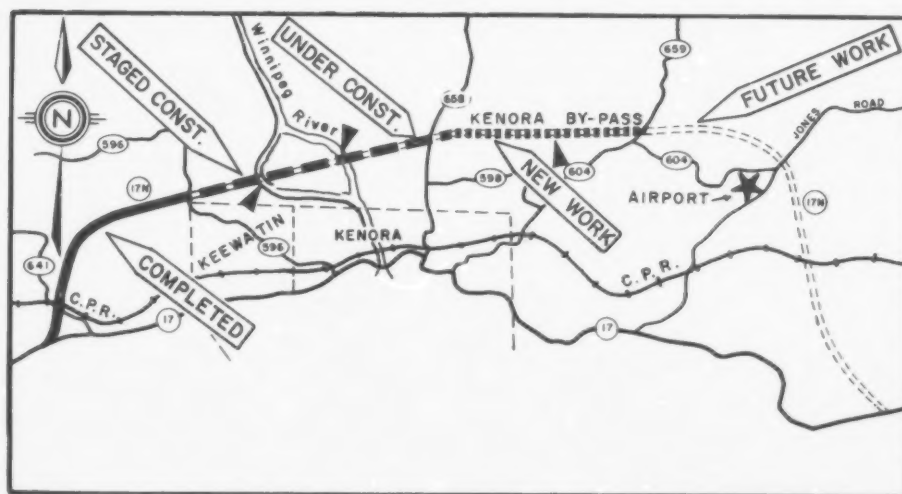

As a result of traffic congestion on the Trans-Canada Highway through Kenora, a bypass of the Kenora, Keewatin and Jaffray-Mellick areas is now under construction. The new route begins just west of Highway 71 and runs north of the Kenora Airport and then westerly, with intersections at Secondary Highways 659, 658 and 596, rejoining existing Highway 17 just west of Secondary Highway 641. The initial stage of construction will feature two lanes with full width paved shoulders, truck climbing lanes and several large structures.

Construction of this new facility began in 1981 and the first section from Highway 17 west of Keewatin easterly 8.4 km to Secondary Highway 596 was opened to traffic in September of 1983.

A grading contract for the section from Secondary Highway 596 easterly 2.8 km, including a structure over the Winnipeg River West Branch was awarded in the summer of 1983 and completed late in 1984. Also, in 1984, a contract for the section from the Winnipeg River West Branch easterly 5.2 km to Secondary Highway 658 including a structure over the East Branch of the Winnipeg River was awarded and will be completed by fall of 1986.

In 1986, it is planned to award a grading contract from Secondary Highway 658 easterly to Secondary Highway 659, including the Ritchie Road underpass.

Further contracts are planned in a continuous sequence until this new bypass has been completed.

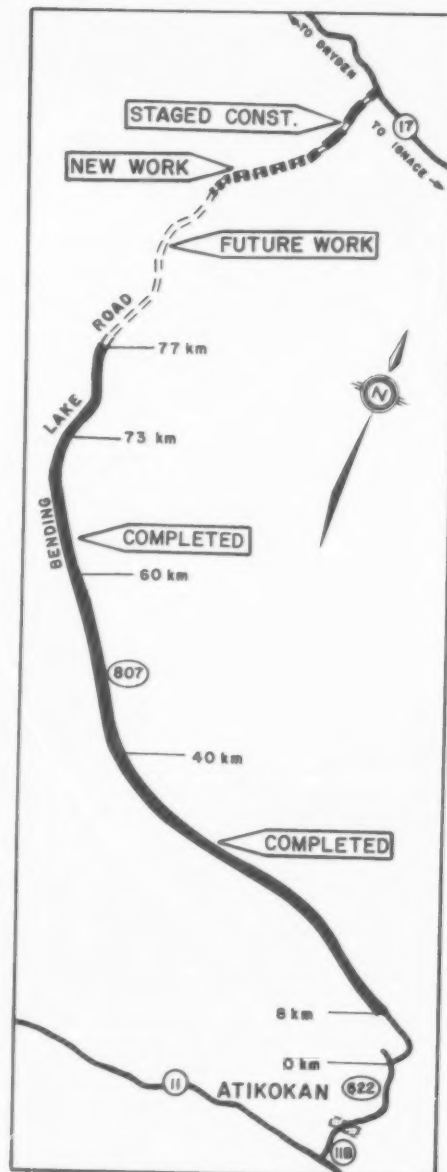

## Bending Lake Road

Bending Lake Road, when completed, will be a new link running from Secondary Highway 622 at Atikokan, northerly to Highway 17, intersecting at a point between Ignace and Dryden. In addition to providing a new transportation facility between Highway 11 and Highway 17, the road already provides access to resources in the Pekagoning Lake area north-west of Atikokan.

Work began in 1979 and since that time grading and granular base has been completed from Highway 622 northerly for 77 km, including bridges at the Seine, Little Turtle and Turtle Rivers. Contracts were awarded in 1985 for grading from Highway 17 southerly for 9.0 km and for crushed gravel and installation of guide rail at various locations on the completed sections. The latter contract was completed, with the first contract having some carryover into 1986.

A contract will be awarded in 1986 for grading from 9.0 km south of Highway 17 southerly for 10.0 km.

Further work is planned over the next few years to complete this new facility.

## **SPECIFIC ACTIVITIES**

### **Remote Airport Construction**

The Remote Airport Construction Program consists of the development of a system of public airports in remote areas of northern Ontario. The improvement in the air transportation system in this part of the Province is particularly important inasmuch as these settlements are not accessible by conventional all-season surface transport modes. Most building materials, food, mail, fuel and other supplies are delivered by air. While many of these shipments could be made by float or ski equipped aircraft, land-based aircraft offer many advantages in payload, fuel efficiency and in continuity of service uninterrupted by seasonal freeze-ups and break-ups.

The Program began in 1968 with two existing airports and continued with additional ones on a priority basis. Since 1968, 18 new airports have been constructed, averaging one airport per year. The most recent additions to the system are Kasabonika and Cat Lake Airports which were commissioned in 1985.

Major work, which began in 1984 at Muskrat Dam and in 1985 at Kingfisher Lake Airport, will continue in 1986. Also, the major expansion work for the Ogoki Airport will continue in 1986. Initial work will begin on the Wapekeka Airport at Angling Lake in 1986.

# REMOTE AIRPORT LOCATIONS

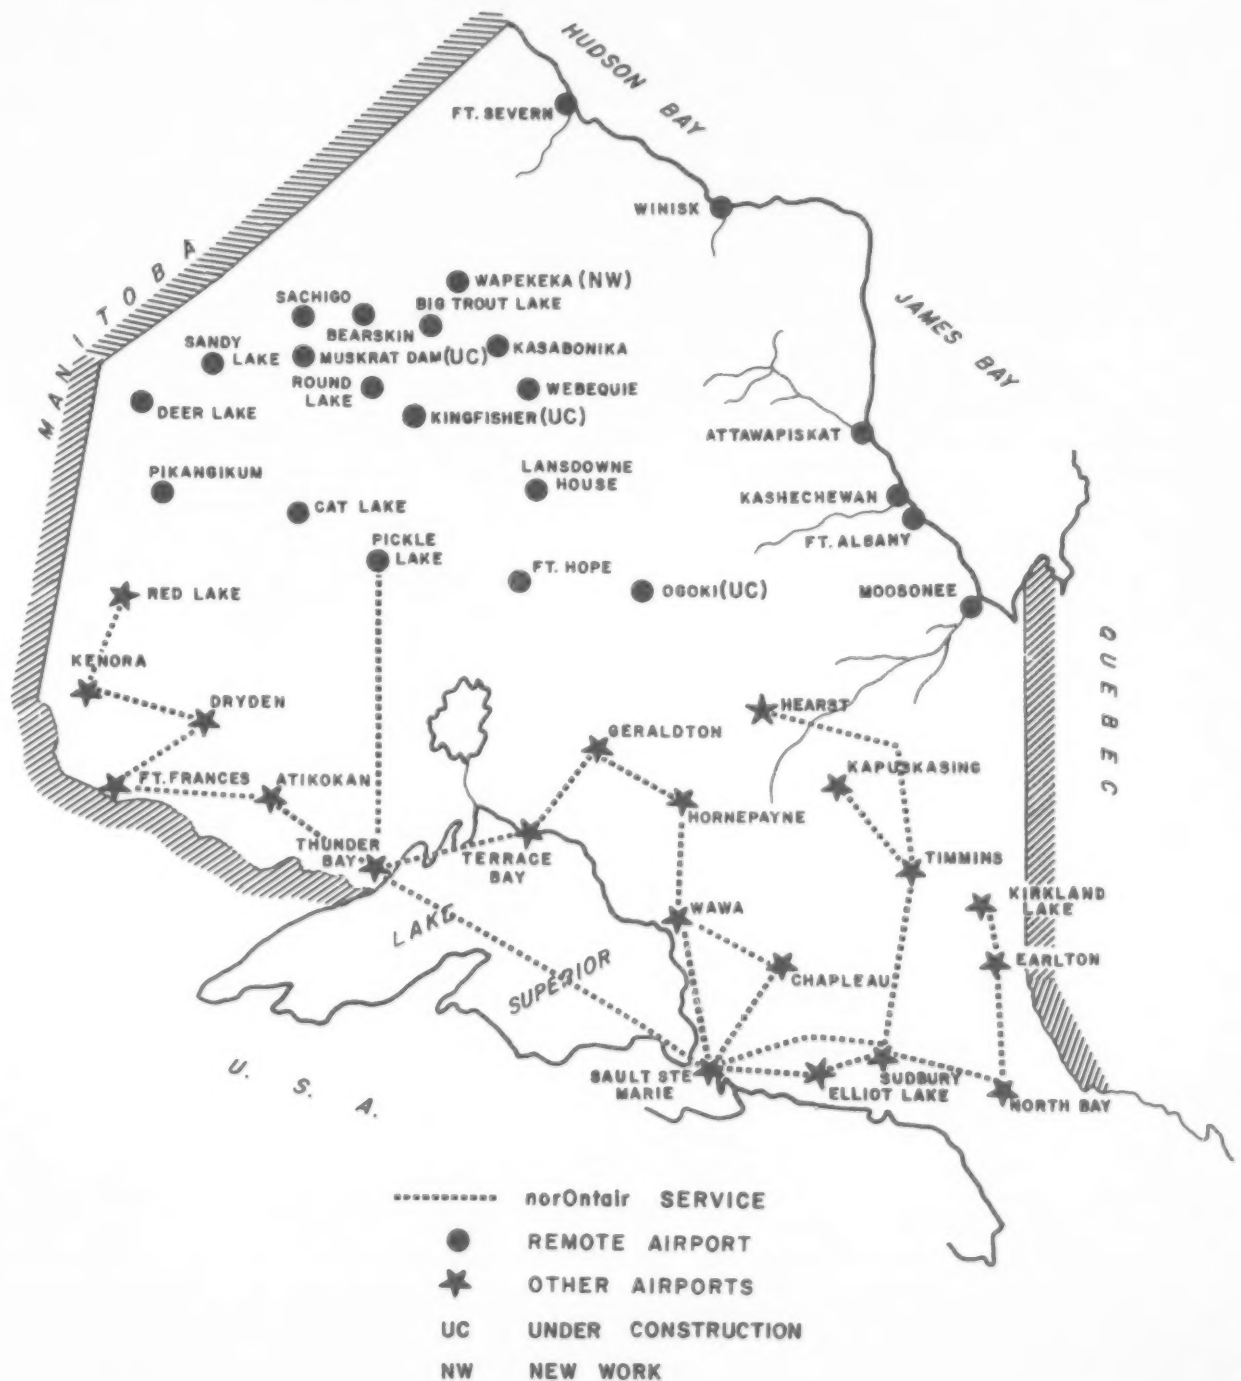

| <u>Community</u>        | <u>Estimated<br/>Population</u> | <u>Runway<br/>Length</u> |

# REMOTE AIRPORTS IN NORTHERN ONTARIO AND AIR SERVICE (norOntair)

## SPECIFIC ACTIVITIES

### Passing Lanes

The construction of passing lanes and truck climbing lanes has proven to be a cost effective means of providing safe opportunities to pass slower moving vehicles and maintaining the operational flow of traffic. A review of traffic operations where passing lanes have been constructed indicates that they function in a very satisfactory manner and public reaction has been favourable, especially on the Trans-Canada Highway in Northern Ontario.

It is intended to continue with the construction of passing lanes in areas where the present criteria and experience indicate they will be effective. Eleven passing lanes are planned for award during the 1986-87 fiscal year of which five are in Northern Ontario.

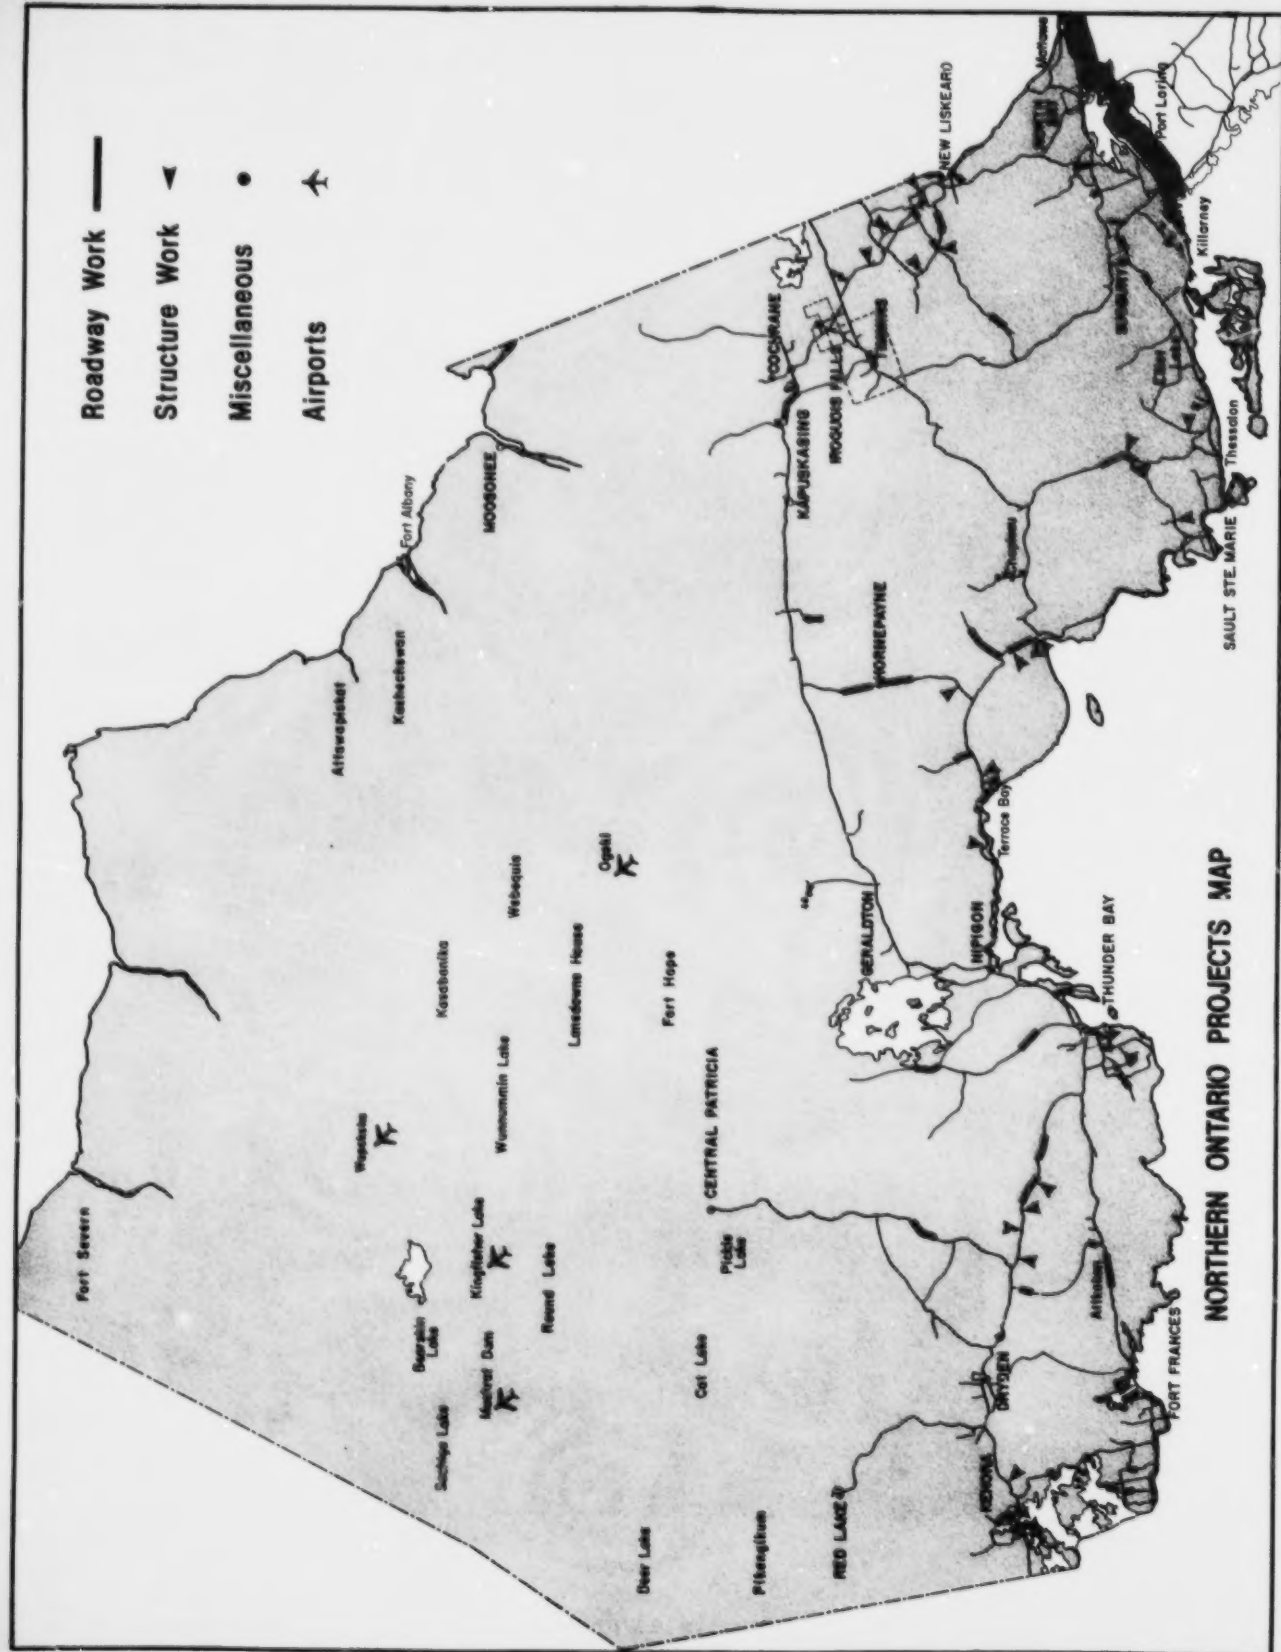

The following table indicates the number of passing lanes constructed in Northern and Southern Ontario over the past ten years on an annual basis.

| <u>Year</u>                                  | <u>Northern<br/>Ontario</u> | <u>Southern<br/>Ontario</u> |
|----------------------------------------------|-----------------------------|-----------------------------|
| 1985                                         | 6                           | 7                           |
| 1984                                         | 3                           | 1                           |
| 1983                                         | 14                          | 1                           |
| 1982                                         | 4                           | 6                           |
